Web Developer Team Management Systems Architect

Web/Mobile Developer at E Commerce Percs

April 2006 - July 2006 (4 months)

Mobile/Web Application Development

Projects

ZeroIN

April 2013 to Present

Members:Russell O., Yat Pan Ng

ZeroIN is the first context-aware, intelligent messaging app for the car. It uses your personal smartphone

 to keep email distractions to a minimum, no matter what car you're in. Only messages that are important,

 contain actionable content and merit attention are read out, and drivers can simply respond by voice — to

 keep their eyes on the road and hands on the wheel. Stay connected to what's important - ZeroIN restricts

 incoming messages to just those from important contacts, and then distills the content to just the parts that

require your attention.   Take action safely – reply to both incoming and pending action items via voice.

Recordr

December 2012 to Present

Members:Russell O., Grae Joquico

Recordr is the easiest audio/sound/voice recorder you can find. You can have the recordings automatically

sync across your devices with iCloud. It even allows you to record and play in the background! Other

features includes: 1. Sync files via your iTunes. 2. Share recordings via SoundCloud 3. Backup media files

to your Dropbox account 4. Upload to your Google Drive™ Account 5. Send to friends via E-Mail. Recordr

produces high quality recordings that can be used for interviews.

SoFAB.com.ph

September 2010 to Present

Members:Russell O., Bryan Chan, Richard G., Grae Joquico
